

If Your Wedding Ceremony is Important to You, Keep Reading!

Our cameras are discreetly placed so they are not readily noticeable. Ron remains at a small control cart in an unobtrusive location. There are no camera operators moving around during the service, nor are there any flashing lights on the cameras. The cameras are positioned in inconspicuous locations to capture the wedding in a unique manner.

Due to the uniqueness of every location, adaptations to the above are sometimes necessary. However, our goal is to be discreet and inconspicuous. We want to preserve the sacredness of the ceremony and to be respectful of your facility and practices. We also will leave the facility as it was when we arrived.

Although all of our cameras are remotely controlled by one operator, that operator has full control over all functions of each camera, including zoom, focus, exposure, etc. so while using only one camera operator, he has a director-style view from each. The status of each camera is displayed on a screen while the operator switches between views and edits your video in real-time. The cameras can be placed up to 600 feet away from the operator so not only are the cameras hidden from view, the operator is "invisible," too.

Ron's cameras have fantastically smooth pan and tilt control to provide you with professional results. HeavenlyCam's high angle gives you sweeping views from above.

We will usually ask the groom to wear a tiny, inconspicuous microphone attached to the lapel of his tuxedo. This picks up what he says as well as what the people immediately surrounding him say.
